Gopanchanga 7.5ml User Instructions as of 24 5 26

How to make 37.5 Litres Spray mixture: Take 37.5 litres water in a 50 litres empty bucket/Drum with lid. Shake this 7.5 milli pouch once. Cut and open this pouch in on top or in one corner, add / pour this 7.5 milli into the 37.5 litres water in the bucket. Mix by hand 5 times only. Do not mix more than 5 times. See Video. Now 37.5 litres spray mixture is ready. Close the bucket/Drum with the lid or a thick Card board (flattened Box). Use this spray mixture immediately or within 30 days of preparation.

For all field Crops up to 5 feet height: Take a well cleaned 15 litres fine mist Sprayer (Ultra low volume sprayer pump, fitted with fine mist spray Nozzle). From 50 litres bucket, take out only 15 litres spray mixture into the Sprayer and spray over crops in one full acre (0.40 Hectare). The Spraying person must walk very fast across 1 acre field to cover entire field with just 15 litres. For more yield, spray once in 10 or 12 or 15 days. If plants or trees are suffering from insects, pests, fungus, bacteria or viral diseases, then, spray 3 times only, once in 7 days. Even if 10%~15% of plant leaves receive the spray, it is considered enough. Even if only 80% of the plants gets spray it is considered enough. For baby plants spray 1 or 2 feet above the plants, in the air above the baby plants.

For all Short trees, that grow up to 15 feet tall: Spray 20~30 litres for 1 acre (1 acre = 0.40 Hectares) once in 15 or 30 days. Trees have 5 sides. Viz. East, West, North, South and Top. Spray only on one side of the trees (alternatively on to 4 sides) every time spraying is done.

For all tall trees above 20 feet even up to 50 feet: Spray only on the base trunk of the tree, between 2 and 8 feet from ground level. Spray about 500ml to 1 litre per tree, depending on the trunk size of trees. For more growth and yield, spray once in 15 or 30 days. If trees are suffering from insects, pests, fungus, bacteria or viral diseases, then, spray 3 times only, once in 7 days.

For Drone spraying: From prepared 37.5 litres spray mixture, take out one Drone tank full (10L or 12L or 15L) and spray over 1 acre of crops. For Trees spray with Drone 20 to 30 litres for 1 acre of trees.
